

About listening to cell phones

Our Yandex.Widget 26.04.2012 | Mobile network In the store you molekuele Jammer universal jammer cell phones The modern reality is that every technological progress is providing invaluable the benefits to mankind and allow us more comfortable to live Willy-nilly has detrimental side creates a certain danger to others. To this includes a modern telecommunications such as mobile phone standard GSM. Of course it is our indispensable assistant for he has rescued us from annoying telephone wire at home or at work and enables us at a convenient time and in almost any a civilized place to connect with the right people. But few in this case think what this invention entails a pretty serious loophole regarding the confidentiality of information and personal data protection. To implement listening mobile phone is much easier than it may seem at first glance. This is due to the fact that most of the protective systems which call our impregnable cellular operators in reality easy cost. But many of the subscribers remain quite confident in your phone and trust him the most Frank conversations. They believe that in addition to the interlocutor none of their secrets will not hear. But no matter how it is strange in our magical country on the Internet or the media sometimes there are very interesting details of his phone conversations known politicians, businessmen, actors and other people. And this is only a small part of what is happening under saveloy secrets of listening to cell lines of our operators. In Russia as in Western countries, wiretapping and recording of private conversations ongoing with the help of wireless communication systems, the phenomenon is quite rare. Moreover it is already so common that in mid-1998 there has been a special term ESM cellular networks. In order to find out how is listening to our conversations and what it reveals the obstacles let's deal with the basic scheme of the organization the mobile communication system. It consists of three main devices radios cell phone base station through which the connection and communication center MTSO Mobile Telephone Switching Office responsible for managing the operation of the entire system as a whole. Cell the phone is a portable transceiver radio. Every mobile the unit has its own electronic serial number ESN carefully encoded in the microchip of the phone is still under manufacturer and famous only technicians performing repair and service service.
